

EXTENDAGO → WOOCOMMERCE

ExtendaGO connect allows you to integrate and import products and inventory from ExtendaGO to WooCommerce and sync inventory across both systems.

This extension requires a ExtendaGo account. If you do not have one, [you can sign up for a free trial account here.](#)

Installation:

1. Go to: WordPress Admin > Plugins > Add New
2. Search for “Extendago Connect” and activate plugin
3. Get a Arture license key at <https://www.arture.nl/product/extendago/>
4. Enter your credentials and save
5. Add the cronjobs, available on the SETUP tab, on your hosting
6. Existing webshop with products ?
 - a. Yes = Trigger the “Export” call on the SETUP tab for importing all products from Woocommerce to Extendago
 - b. No = Trigger the “Import” call on the SETUP tab for importing all products from Extendago to Woocommerce
7. Manage all your changes in ExtendaGo

A screenshot of the WordPress 'Plugins toevoegen' (Add New Plugins) page. At the top, there's a search bar with 'Extendago' entered. Below the search bar, the results for 'Extendago Woocommerce' are displayed. The plugin is shown as 'Actief' (Active). The description reads: 'Extendago Connect makes it simple. No duplication of work, but a central place for your...'. It is attributed to 'Door Arture B.V.'. The plugin has a 5-star rating (86 reviews) and is noted as 'Minder dan 10 actieve installaties'. It is also marked as 'Laatst geüpdatet op: 60 minuten geleden' and 'Compatibel met je huidige versie van WordPress'. A 'Meer details' link is visible. At the bottom right of the search results, it says '1 item'.

More information at: [Installing and Managing Plugins](#)

Subscription:

The plugin is continuously being developed for new features and bug fixes. New versions will be available through the Wordpress library.

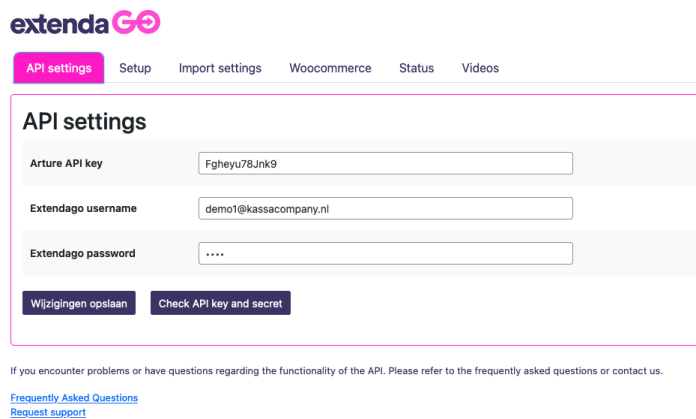

Features:

- Woocommerce → Extendago:
 - Export of products from Woocommerce in Extendago through our Export function. Only new/not existing products will be created
 - Processing of paid weborders in Extendago
- Extendago → Woocommerce:
 - Creating new products
 - Process product changes
 - Process stock changes
 - Process images
 - Process category structure
 - Apply discount rules
 - Hide products from webshop

Configuration tabs:

1. API settings

- Enter and check your credentials

The screenshot shows the 'API settings' configuration page in the Extendago plugin. At the top, there is a navigation bar with tabs: 'API settings' (highlighted in pink), 'Setup', 'Import settings', 'Woocommerce', 'Status', and 'Videos'. Below the navigation bar, the 'API settings' section contains three input fields: 'Arture API key' with the value 'Fgheyu78Jnk9', 'Extendago username' with the value 'demo1@kassacompany.nl', and 'Extendago password' with masked characters '....'. At the bottom of the form, there are two buttons: 'Wijzigingen opslaan' (Save changes) and 'Check API key and secret'. Below the form, there is a small text block: 'If you encounter problems or have questions regarding the functionality of the API. Please refer to the frequently asked questions or contact us.' followed by two links: 'Frequently Asked Questions' and 'Request support'.

2. Setup

- Quick explanation of our setup guide.
- Export:
 - With an existing webshop you can perform a one-time export of your products to Extendago. All basic product data is then directly available in Extendago. You can perform the action with the blue button "Export products" after which the processing is started. This may take some time!
- Import:
 - Simply create your products within Extendago, after which you can have them automatically processed in your webshop. You can always manually start a full synchronization with the blue button "Import products".

- Cronjobs
 - The indicated 3 cronjobs on the Setup tab of the plugin must be set for proper processing. Set all 3 with an interval of 5 minutes. Check with your hosting party what the correct setting is for calling these url based cronjobs.
- 3. Import settings
 - Determine how your product/data is processed in the webshop. For example, do you always want to process new products as a concept and publish them yourself? Choose the options that match your webshop.
- 4. Woocommerce
 - Define your shop for order processing and enable, if your are going to live, the order processing
- 5. Status
 - The status tab provides a good overview of all current actions and actions. This is therefore the first check with any question. For example, you can see here when a certain action took place for the last time. With the remaining batches you can check whether current data processing is still taking place. The logs also provide extensive information for any support request.
- 6. Videos
 - For many default actions we have create a video.

FAQ:

How quickly do new products and changes go live?

All changes are processed every 5 minutes. Depending on the amount of changes at that time, this can vary between 5 and 15 minutes.

Where can I enter meta data or additional attributes for a product?

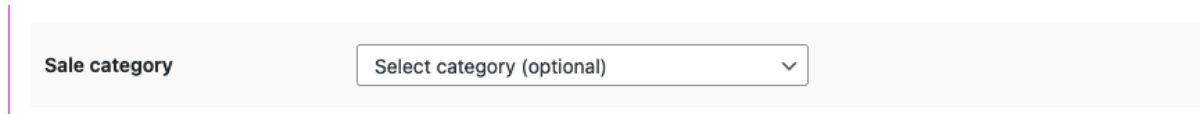

The link only processes the data that is available. Within your webshop you can easily supplement this with extra information.

What about the web orders?

The checkout flow can be set completely according to your own wishes with links to payment and shipment providers. Apart from the standard Woocommerce processing, the web order is also processed directly in Extendago upon payment.

How can I place all my discounted products in a separate category?

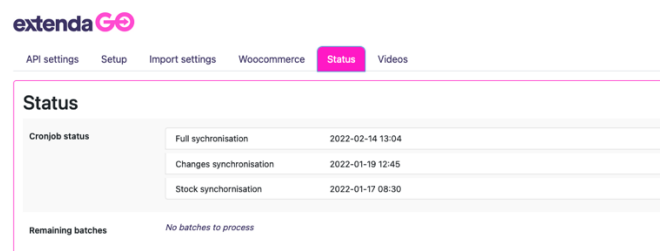

Create a category within Woocommerce and set it as a Sale category on the Import settings tab.

The image shows a user interface element for selecting a sale category. It consists of a label 'Sale category' on the left and a dropdown menu on the right. The dropdown menu is currently set to 'Select category (optional)' and has a downward-pointing arrow on its right side.

I don't see my changes in the webshop?

Any change will be processed within 5 minutes. However, with many changes, this can take more time. Check on the status tab if there are any remaining batches available.

The image shows a screenshot of the 'Status' tab in the Extendago interface. The interface has a navigation bar with the following items: 'API settings', 'Setup', 'Import settings', 'Woocommerce', 'Status' (highlighted in pink), and 'Videos'. Below the navigation bar, the 'Status' section is displayed. It has a sub-section 'Cronjob status' with a table showing the following data:

Cronjob status	Full synchronisation	2022-02-14 13:04
	Changes synchronisation	2022-01-19 12:45
	Stock synchronisation	2022-01-17 08:30

Below the table, there is a sub-section 'Remaining batches' with the text 'No batches to process'.
